INTRODUCTION TO TRANSMISSION SYSTEM

Data transmission refers to the movement of data in form of bits between two or more digital devices.Types of Data Transmission

What is Data Transmission? Types of Data Transmission.

Data transmission is the transfer of data over a point-to-point or point-to-multipoint communication channel. Examples of such channels are copper wires, optical fibers, wireless communication channels, storage media and computer buses. The data are represented as an electromagnetic signal, such as an electrical voltage, radiowave, microwave, or infrared signal. Analog or analogue transmission is a transmission method of conveying voice, data, image, signal or video information using a continuou
